

For customers

Precision Machinery Company

Aiming at improved productivity of customers.

For Precision Machinery Company, the major customers are manufacturers of semiconductors and electronic devices/components that are leading today's advanced information society. Since technological innovation constantly continues in these industries, the stable supply of equipment meeting customer needs is the mission of Precision Machinery Company.

To carry out our mission, the process of development, manufacturing and maintenance is not allowed to be disrupted by defects or accidents. With the basic philosophy of "safety first," Precision Machinery Company considers safety at each stage of design, manufacturing, installation, starting up, and operation. In addition, we promote the prevention of recurrence of any problems by proactively collecting and analyzing information on accidents, disasters and potential incidents.*1 In addition, we aim at zero accidents and disasters through safety training, safety patrol, chemical management and risk assessment. Furthermore, to enhance partnerships with affiliate companies such as EBARA Kyushu Co., Ltd. and EBARA Field Tech Corporation, we have regular liaison meetings, and build an emergency contact system using electronic media to share the information. We have prepared a system to promptly respond to customer demands.

*1."Potential incidents" indicate a dangerous and breathtaking situation or moment just before an actual accident takes place.

Thoroughly manage chemicals

Our company uses a wide variety of chemicals in various processes of the business. Even hazardous substances are included in these chemicals. To ensure the safety of workers and prevent accident-related disruptions of manufacturing activities, we implement a thorough management of chemicals in their storing and handling.

We check incoming chemicals all at once in one acceptance room. We also enhance the management accuracy by registering information about chemicals, the quantity purchased/used, and storage details in our computer system. In workplaces using chemicals, we strive to prevent accidents and loss by patrolling the facilities and designating specific chemicals as ones that require intensive management by a responsible person like a division manager. In addition, when disposing of chemicals, we strictly manage the composition and quantity of waste solutions and disposing method to make sure that the disposal does not cause any problems in terms of the environment and safety.

Consolidated management of chemicals aims not only for thorough safety management, but also for an environmentally friendly management by reducing the chemical quantities used and the waste solutions disposed of.

Audit on the chemical storage by on-site patrols.

Kozo Nakao
President,
Precision Machinery
Company

Safety is the starting point of customer satisfaction.

When working at customer sites, we comply not only with EBARA Group's safety rules but also with the rules created by customers to ensure that we do not disrupt customer business by accidents. While companies nowadays seek maximum efficiency, it is increasingly important for employees to bear in mind safety in working environments. This is even so from the aspect of CSR; ensuring the health and safety of employees becomes the first priority. I have tried to

have my employees understand that our well-being eventually becomes the basis of stable provision of our products to customers. As it has in the past, Precision Machinery Company will continue to have a deeper understanding and implement practices on the rules created with the principle of "Safety first" and will globally deploy this spirit as we learn the rules of safety management in other countries.
